**My Contributions to Student Welfare (SW), Clubs, and Chapters**

**Microsoft Innovation Club (MIC) - Vibrance**

As part of MIC, I worked in Vibrance to contribute to one of the most important and famous events – **VITopoly**. My responsibilities included supporting the **marketing efforts**, engaging with participants, and ensuring smooth execution of the event. I collaborated with team members to attract participants and maintain the event's energy and excitement. This experience enhanced my teamwork, event management, and promotional skills.

**Google Developer Group (GDG)**

I was an active member of the **Organising Committee**, where I helped plan and coordinate multiple technical events. Additionally, I contributed to an **industrial project internship** with **Heliverse**, where we worked on developing an **Anomaly Detection and ML-based Advanced CCTV System**. This project provided me with real-world exposure to applying machine learning techniques for surveillance and security applications, improving both my technical expertise and problem-solving abilities.

**Bionary Club**

As a member of Bionary, I served as an **ML Technical Evaluator** for participants in competitions and hackathons. I was actively involved in conducting **webinars**, mentoring juniors, and managing multiple events. In addition, I took on the role of **Student Organiser**, where I handled both technical and administrative tasks to ensure smooth event execution. This role strengthened my mentoring, leadership, and technical evaluation skills.

**Open Source Programming Club (OSPC)**

In OSPC, I contributed as a **Project Manager**, guiding projects and supporting peers with their technical needs. I also played an important role in **organising events** and assisting club members in collaborative projects. This experience allowed me to refine my skills in project management, teamwork, and providing technical mentorship to others.

**General Contributions Across Clubs and Chapters**

In addition to my specific roles in different clubs, I consistently helped **all clubs** in both technical and non-technical aspects. I supported teams in managing events, assisting with hackathons, and ensuring smooth operations. My contribution included offering technical guidance, troubleshooting issues, and also taking care of event logistics to create a balanced and effective environment for all participants. This cross-functional involvement enabled me to build strong collaborative skills and contribute meaningfully to the student community at VIT.
